		~J.P.	

Continuation of 2. NOTE: The proposed amendment, if entered, would newly add the claim limitations of, for instance, "the gate electrodes making up of gate electrode groups in which the lines belonging to each coset of modulo N within successive pixel rows are connected to common lead lines, N being a predetermined natural number between 4 and one half the number of pixels in a column, and also being a minimum number corresponding to a periodic unit of gate electrode connections to the connection terminals within the successive pixel rows, the gate electrodes having common connection terminals to reduce the number of the connection terminals to less than N." The proposed amendment would alter the scope of the claims, thereby requiring additional search and consideration. By such reasoning, non-entry of the proposed amendment is deemed proper.
